

In recent years, therapeutic peptides have been developed for the treatment of several diseases such as cancer, metabolic disorders, nervous system disorders and gastrointestinal disorders, among others. As a result of their efficacy treating a huge array of conditions, further research has been done to develop a rich pipeline of novel peptides.

SMI's 3rd annual Peptides event provides the perfect platform to discuss the latest innovations and development in the peptides industry and explore a number of pressing issues such as the use of Cell Penetrating Peptides (CPP), the challenges involved with oral peptides and novel technologies, and many more.
