

This conference brings together researchers from both academia and industry, and will discuss the development of techniques and tools implemented in High Content technologies and Phenotypic Screening applications.

Hot topics to be covered include 3D cell based screening methods, high content screening and data management, the use of model organisms and novel approaches for phenotypic screening.

Attending this event will provide you with excellent opportunities for networking with attendees from big pharmaceutical and biotech companies, academia and government, helping you to find solutions and build collaborations.
