

GenomeQuest 6.3 for IP offers researchers a comprehensive on-line research solution that provides content aggregation, search algorithms, and analysis tools. New capabilities offered in the 6.3 version include: integration of DNA and protein searching, where researchers can now search IP databases of nucleotides and associated proteins simultaneously; content expansion with over 265,000 patents stored in the GQ-PAT database; enhanced search and analysis with multiple search algorithms; and an upgraded result browser that allows users to interactively query/filter/group on any field, pinpoint matches of most interest, and generate comprehensive IP search reports. Multiple users can collaborate on shared datasets.
