

The Potentiometric Titrator (COM-1700) allows up to four different titrations to run in parallel. The COM-1700 features high-speed communications with no response time lag, so results appear in real-time. The compact design reduces bench space by 25%. The new buret design allows automatic reagent exchange, the sample changer accommodates various test tubes, beakers, and conical flasks. The instrument has a large color touchscreen that allows for monitoring of any station and provides for real-time pH calibration and stability.
