

Over the years, GTCbio's 14th Cytokines & Inflammation Conference has become an established meeting point for academic scientists, industry clinical developers, and government researchers to discuss complementary approaches in the field of cytokine biology. We are excited to announce the 13th annual edition of this meeting, which will take place January 25-26, 2016 in San Diego, CA, so mark your calendars and save the date!

Some focused topics we will discuss include developments in the therapeutic application of cytokines and proposal of new targets, the complex relationship between the immune system and microbes in the homeostasis of mucosal tissues, novel means to modulate immune pathways to promote anti-tumor activity, and many more.

Please join us for not only presentations on the latest research, but networking sessions where you will meet and collaborate with fellow researchers on the future of cytokines research! We hope to see you in San Diego!
