

GTCbio is proud to present the 3rd Metabolomics - Advances & Applications in Human Disease Conference, which will be part of The Genomics & Big Data Summit and takes place May 25-26, 2016 in Boston, MA.

There is still significant human variability in metabolite identification for targets and pathways. These challenges affect the advancement in biomarker development, mass spectrometry-based imaging, big data, and the application of metabolomics for drug discovery and development.

Join us for an event that presents new research and offers networking opportunities with the researchers and scientists who are working on developing clinical assays, connecting the metabolome and the genome, and establishing common quality standards for experimental data

Sessions include:

- I. Advances in Metabolite Markers - Discovery and Validation
  - II. Imaging and Computational Approaches to Assessing the Metabolome
  - III. Metabolite Identification - Targets and Pathways
  - IV. Bioinformatics for Metabolomics: Current Status and Future Directions
  - V. Translating Metabolomics Discoveries in Clinical Practice
- We hope to see you there!

Conference Dates: May 25-26, 2016
