Good Manufacturing Practice (GMP) is a system for ensuring that products are consistently produced and controlled according to quality standards. It is designed to minimize the risks involved in any pharmaceutical production that cannot be eliminated through testing the final product. GMP covers all aspects of production; from the starting materials, premises and equipment to the training and personal hygiene of staff. Advanced studies are being made to improve quality of products, reduce safety risk and cost, and enhance international credibility and public image and many more.
